

## IT AND SERVER ROOMS

---

IT Suites, server and comms rooms are now a feature of many modern premises. Aspen Air Conditioning understands that the environment needs to be kept at just the right temperature to enable the IT equipment to operate correctly and not overheat. Equally important is the comfort of the occupants who work within these areas.

Aspen Air Conditioning has completed many installations for businesses, schools, colleges, local authorities and NHS Trusts throughout the UK.

## RESIDENTIAL

---

As people become used to working, shopping and even driving in air conditioned environments, more look to having systems installed in their homes.

Residential applications offer different challenges and constraints upon the design. There are usually no false ceiling voids available for concealing equipment, pipes and cables. Siting of outdoor units can be difficult - especially if you don't want to annoy the neighbours - and a noise level from equipment that may be acceptable in an office, may not be when used in a bedroom environment. Conservatories can be prohibitively expensive to cool adequately, though measures can be taken such as fitting blinds and heat reflective film to reduce the heat gains to a reasonable level.

The staff at Aspen Air Conditioning have vast knowledge of types of equipment available and experience of many different applications, ranging from single bedrooms to luxury penthouse apartments.
